2. The following is an examiner's statement of reasons for allowance: The prior art cited, specifically Shozo, although reciting an apparatus comprising a mounting substrate having a first light source and a second light source mounted thereon and a first aperture and a second aperture, the first aperture device can be aligned over the mounting substrate so that light from the first light source is emitted through the first aperture of the first aperture device and light from the second light source is emitted through the second aperture of the first aperture device, the prior art cited does not disclose the following:
  - An apparatus comprising a mounting substrate having a first light source and a second light source mounted thereon and a first aperture and a second aperture, the first aperture device can be aligned over the mounting substrate so that light from the first light source is emitted through the first aperture of the first aperture device and light from the second light source is emitted through the second aperture of the first aperture device, wherein the first aperture device is adjustably mounted to the mounting substrate so that the first aperture device and move with respect to the mounting substrate, and the first aperture device is aligned with the mounting substrate to allow the emission of light from the first light source through the first aperture of the first aperture device and light from

the second light source through the second aperture of the first aperture device by moving the first aperture device with respect to the mounting substrate;

- An apparatus comprising a mounting substrate having a first light source and second light source mounted thereon a first aperture device having a first aperture and a second aperture; wherein the first aperture device can be aligned over the mounting substrate so that light from the first light source is emitted through the first aperture of the first aperture device and light from the second light source is emitted through the second aperture of the first aperture device further comprising a flashlight and wherein the mounting substrate and the first aperture device are part of the flashlight.
- A mounting substrate having a first light source and a second light source mounted thereon a first aperture device having a first aperture and a second aperture wherein the first aperture device can be aligned over the mounting substrate so that light from the first light source is emitted through the first aperture of the first aperture device and light from the second light source is emitted through the second aperture of the first aperture device and further comprising a masking device which prevents light from the first light source and the second light source from passing through the masking device if the light is emitted in a first direction.
- An apparatus comprising a mounted substrate having a first light source and a second light source mounted thereon a first aperture device having a first aperture and a second aperture wherein the first aperture device can be aligned

over the mounting substrate so that light from the first light source is emitted through the first aperture of the first aperture device and light from the second light source is emitted through the second aperture of the first aperture device; wherein the first aperture device is mounted over the mounting substrate and further comprising a first color filter covering the first aperture of the first aperture device a second color filter covering the second aperture of the first aperture device; a third color filter covering the third aperture of the first aperture device and a fourth color filter covering the fourth aperture of the first aperture device; wherein the first aperture device can be aligned over the mounting substrate in a first position so that light from the first light source is emitted through the first color filter and the first aperture of the first aperture device and light from the second light source is emitted through the second color filter and the second color aperture of the first aperture device; and wherein the first aperture device can be aligned over the mounting substrate in a second position so that light from the first light source is emitted through the third color filter and the third aperture of the first aperture device and light from the second light source is emitted through the fourth color filter and the fourth aperture of the first aperture device.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
